

The image features a parody of the Star Wars 'Force' logo. The word 'FOG' is at the top in a yellow, outlined, sans-serif font. Below it, the phrase 'MAY THE FORCE OF THE FOG BE WITH YOU' is written in a smaller, white, all-caps, sans-serif font. The word 'FORCE' is in the center in a large, yellow, outlined, sans-serif font. At the bottom, the words 'SERVICES AND SUPPLIES' are written in a yellow, all-caps, sans-serif font. The entire text is enclosed within a yellow rectangular border. The background is black with numerous thin, white, diagonal streaks of varying lengths and angles, creating a sense of motion or a starry sky.

Company Overview

By SACW – We have been in the disinfection and sterilization business for over 20 years. Together our company has over 100 years of knowledge in the industry. From disinfection of surfaces, water and air we are proud to bring solutions to market that we feel proud to call our own.

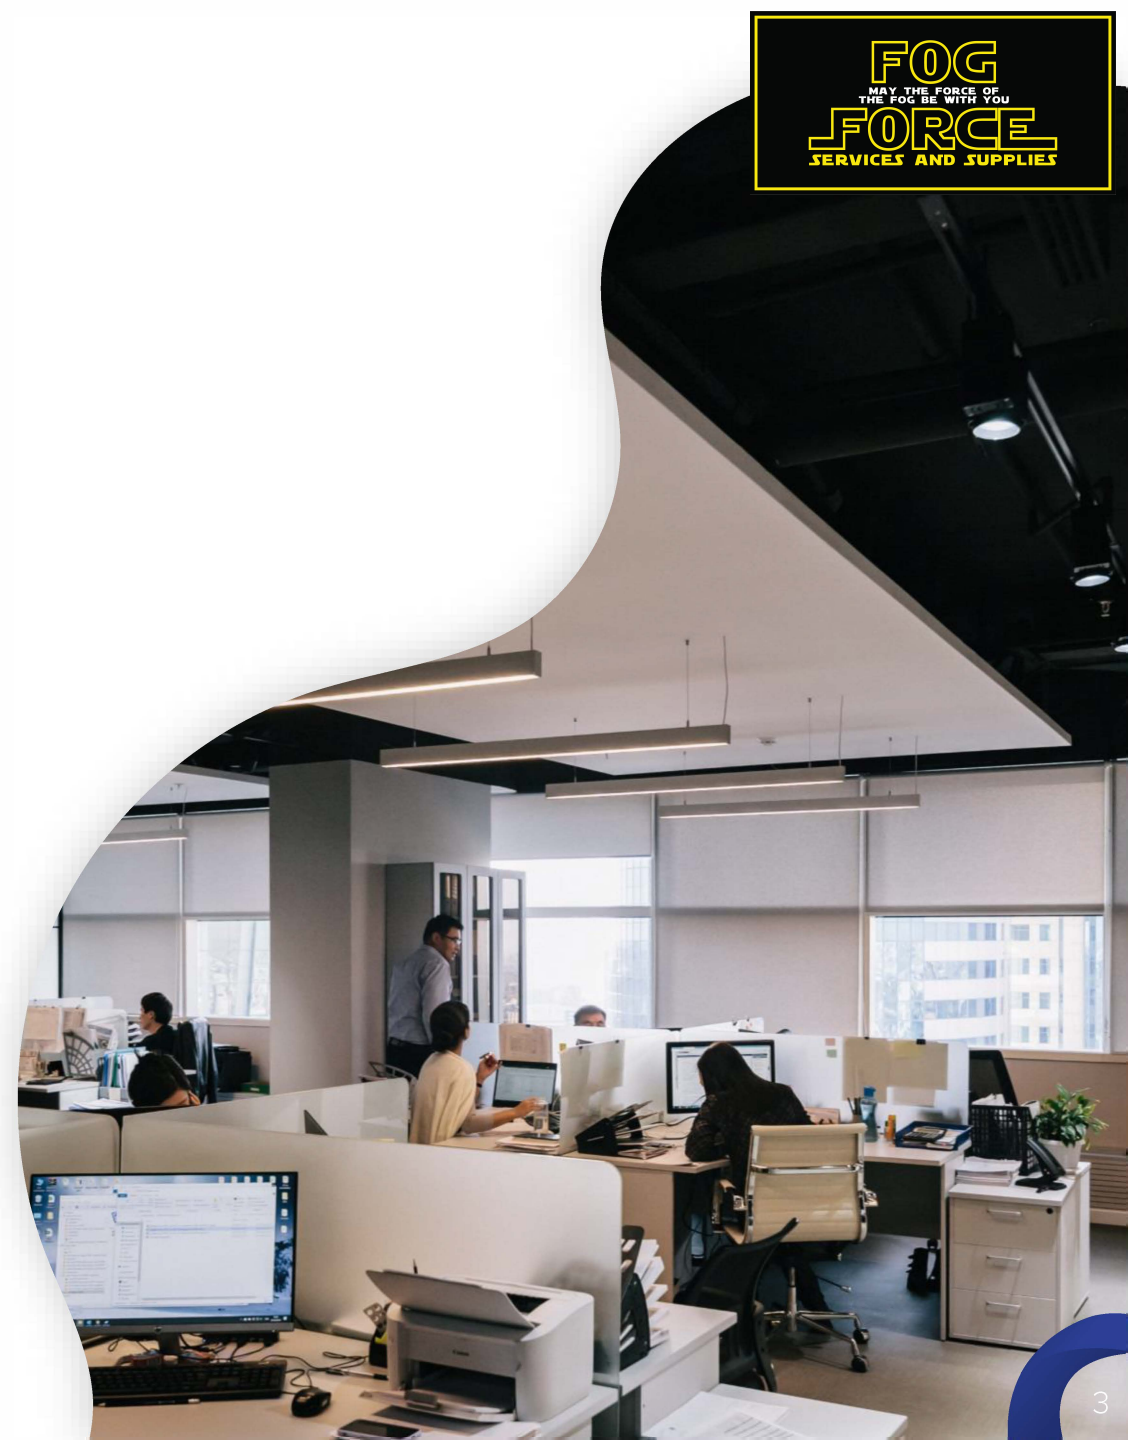

General

The most critical tasks for institutions and organisations when preparing for a possible community transmission of viruses and bacteria is planning and executing. It is for this reason we have developed a product to help ease the process of learning and lessen the time of error when addressing such concerns.

The Antiviral Air Sanitizing Bomb is an aerosol atomiser that uses the latest in chemical engineering techniques to provide a solution to sanitization of spaces and a rapid and affordable rate.

Our chemists have developed a disinfectant that is extremely effective at killing viruses, bacteria, and fungus. Not only that but when developing the formulation, we reminded ourselves that the solution needed to be accessible to the greater population and that meant cheap.

It is viral to keep private and public places sterile and keen to prevent farther disinfection. The only solution that is worth implementing is one that can be replicated time and time again with minimal downtime and impact on the people directly affected by the disinfection. Our product meets these criteria by making the disinfection/sterilization process easy with one press of a nozzle and by walking around a space that needs disinfection/sanitization.

What Makes Our Product Unique Is The Range Of Benefits That It Provides:

Fast turnaround time

Because of the nature of disinfection the time taken to disinfect an area is greatly reduced compared to traditional disinfection methods.

Residual Effect

Because there are trace amounts of disinfectant left on the surfaces after use, this helps prevent further contamination.

Easy to use

Simply press the nozzle in and walk around the room. The contents will spray into the air and fall onto surfaces.

Kills Viruses, Bacteria and Fungus's

Contents on the can have been proven to kill harmful organisms.

Minimal working disruption

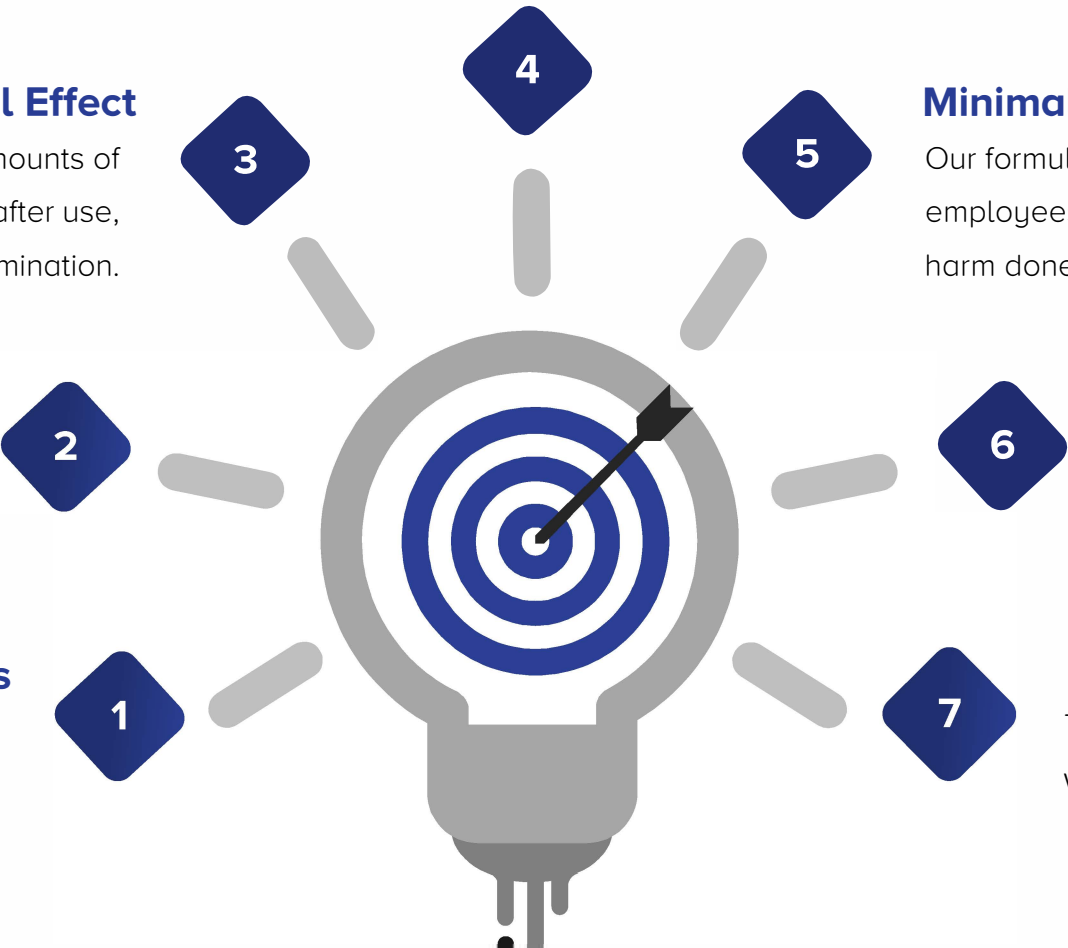

Our formulation allows for learners, employees etc to continue working with no harm done.

Economic price point

Our products are priced far better than other comparative products. Thereby lessening the impact on your operating expenses.

Non-Corrosive

The makeup of the contents is such that it will not corrode the surfaces it falls onto

Products

Schools

Schools, creches and aftercares are breeding grounds for harmful virus and bacteria. By nature, children and being of curiosity which means that touching items, objects and surfaces is commonplace no matter what the rules may be.

Thus, in order to best prepare the surrounds of such an environment, one thing is for sure, it is an absolute necessity for the institution to sanitize and disinfect the immediate surrounds on the children effectively and as often as possible. By doing this you are limiting the potential spread of any harmful virus or bacteria and taking an extra step in **securing the future of our children.**

We at **Fog Force** know that one of the limiting factors in total disinfection and or sanitization in schools etc is the cost vs effectiveness ratio. A solution that cost too much and is highly effective is unaffordable. A solution that is cheap but ineffective is unsafe.

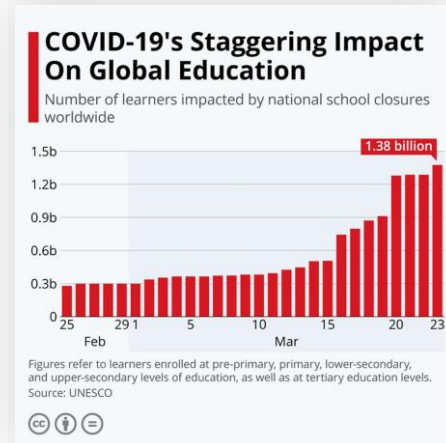

Schools

That is why we have developed a product that meets both of those needs and then some. Our product is priced at the most **affordable** rate to help ensure it is available to as many institutions as possible. Our chemists' have also kept effectiveness front of mind in development meaning that our formulation will **kill up to 99% of virus and bacteria.**

When we are talking about children and learning we understand that time is of the essence and time is limited in today's world. Such that this is the case the aerosol atomizer is the perfect balance of **effectiveness and speediness.** Within minutes our can will disinfect up to 110sqm of space enabling you maintain the attention of your whole class.

Offices

Business is the lifeblood of the country and without it we simple cannot survive. Therefore, it is so important that we find a sustainable disinfection solution for offices, workspaces and meeting rooms. We believe we have that product. Our Antiviral Air Sanitizing Bomb enables you to disinfect office spaces **quickly, affordably and safely**. This leaves you to keep the focus on your business.

It is absolutely vital that we stop the transmission of harmful viruses and bacteria in our workspaces. We simply cannot afford to have another extremely valuable employee due to these harmful organisms. And we do not have to. By disinfecting **often and effectively** we can reduce and stop this harsh reality from tearing our businesses apart.

We also understand that businesses are having to cut costs at this time and for this reason our product is a great alternative to extremely costly deep cleaning services and other expensive disinfecting solutions. Our product is simply to use which means that your existing employees can sanitize a room in a matter of minutes and as frequently as needed. Our products are also **prices at the best rate** in the market so that we can help more businesses.

Mines

Restrictions put in place by governments to contain or delay the spread of Covid-19 have placed difficulties on mining companies operating in affected countries. Most companies, perhaps unsurprisingly, are being coy about their outlook for the coming year. When announcing full-year results for 2019, some companies said their outlook for 2020 would be at best an approximation until the true impacts of coronavirus were clear. These were statements made in February – and with the spread of the virus now a pandemic that shows no signs of slowing, we can perhaps assume that, privately at least, companies are beginning to feel nervous.

We NEED mining and mining needs a fast-acting solution to disinfection of workspaces. Our product is the perfect solution because **if it easy to use, easy to carry and effective at killing up to 99% of viruses and bacteria.**

Mines

Not only will the use of the Antiviral Air Sanitizing Bomb **prevent downtime** in an industry where seconds cost money but it will ensure the safety of the men and women that work day in and day out to ensure our biggest of industry keeps going.

The nature of mining is such that we simply cannot take a chance when sanitizing and disinfecting the spaces around the work area. Our product is proven to be the most effective and solution to prevent the spread of a virus or bacteria.

Our Antiviral Air Sanitizing Bomb is also **non-corrosive** which means that it can be used almost anywhere in the mining ecosystem.
